SUMMARY

Python full stack and machine learning developer with hands-on experience delivering end-to-end **AI/ML projects**, including object detection models with **85% accuracy** and full-stack geospatial tools. Built and deployed models using Python, FastAPI, React, and Docker, with a strong portfolio of public repositories and practical ML applications. Currently pursuing a **B.Tech** in Mathematics and Computing at M. S. Ramaiah University of Applied Sciences.

COMPANY EXPERIENCE

AI Intern @ CodeAlpha

Aug 2026 · 1 mo – Sep 2026

- Built **2 end-to-end AI projects**, including an object detection model using YOLO that achieved **85% accuracy** after hyperparameter tuning, reducing error by **4-5%**.
- Handled data collection, preprocessing, model training, evaluation, and deployment, delivering all tasks on time and documenting work on **GitHub**.
- Framed problems, modeled solutions, and evaluated results using **agentic AI patterns**.

YOLO GitHub Pillow Computer vision Numpy Matplotlib Seaborn Linear regression Google colab

AI/ML Intern @ QSkill

Jul 2026 · 1 mo – Aug 2026

- Led the data preprocessing and model development pipeline for **CIFAR-10 image classifier** and multiple micro projects.
- Cleaned and engineered datasets (handling missing values, outliers, encoding, scaling, feature engineering), built and trained models using **neural networks (TensorFlow, Keras)** and **Random Forest Regressor** (scikit-learn).
- Compared models, tuned hyperparameters, and selected neural networks based on **accuracy** and **R2 score**.
- Wrote evaluation code, documented work, and independently delivered complete model pipelines.

CIFAR-10 TensorFlow Keras scikit-learn Pillow Computer vision Google colab

Data Science & ML Intern @ upSkill Campus

Nov 2025 – Dec 2025 · 2 mos

- Completed a **two-month program** covering data science and machine learning fundamentals.

Deep learning Neural networks ResNet50 Google colab

AI/ML Intern @ InternPe

Oct 2025 · 1 mo – Nov 2025

- Delivered **4 projects** including spam classification, agricultural crop prediction, mining process quality prediction, and breast cancer prediction using organization-provided datasets.
- Implemented **Linear Regression, Logistic Regression, Random Forest Regressor**, and neural networks in Python (**Pandas, TensorFlow, Keras, scikit-learn**).
- Handled preprocessing, model training, and evaluation using **accuracy**, F1, and R2 scores, with best model reaching **91% accuracy**.
- Produced working predictive models for each problem.

EDUCATION

M. S. Ramaiah University of Applied Sciences (RUAS)

Bachelor of Technology (B.Tech), Mathematics and Computing

2024 – 2028

PROJECTS

- SatQueryAI - Full stack geospatial question-answering engine in active development with a working prototype. Built frontend and backend (React 19 + TypeScript, FastAPI, Uvicorn, MySQL, object storage, mapping library). Allows users to ask natural-language questions about satellite imagery and geospatial data, returning outputs and evidence images. Used for own satellite imagery analysis and alpha testing. Solved challenges mapping user input to image outputs, improving the string-to-image pipeline.
- Machine learning - CIFAR-10 classifier (97%; ANN baseline improved by 40% via CNN and ResNet50 transfer learning), MNIST, IPL predictor (79%), diabetes (78%), breast cancer, crop production, mining process, car price, spam, flower species, live image detection.
- Web - AI summarizer, Harry Potter Q&A bot (React), hand-coded portfolio site in HTML, CSS, and JavaScript. Sixteen public repositories at github.com/Prajval-Akka.
